SKILLS

Languages & Frameworks: Python, TypeScript, PyTorch, TensorFlow, FastAPI, Flask, React, Next.js

AI / ML: LLMs, RAG, MCP, AI agents, LangChain, Stable Diffusion, fine-tuning, model benchmarking, NLP

Infrastructure: Docker, Kubernetes, GCP, AWS, Azure, CI/CD, PySpark

Data: PostgreSQL, Neo4j, vector databases, data pipelines

EXPERIENCE

AI/ML Engineer — Constellation Finance

Mar 2025 – Present

- Full-stack application development for an AI-powered financial platform
- Lead developer on the MCP (Model Context Protocol) product, enabling AI agent integrations with financial data

Independent ML Engineer — CreativeRush & Projects

Oct 2024 – Present

- Co-founded CreativeRush Media Lab, designing AI experiments with film creators
- Built AI-powered applications including a legal CRM system and financial analyst chatbot

Machine Learning Engineer — lambda.ai

Jun 2022 – Oct 2024

- Built and optimized the LLM pipeline for an AI-generated news site (news.lambda.ai)
- Developed GenAI model benchmarks, including an inference benchmark for Stable Diffusion cited by Google Research in the Muse paper
- Published Stable Diffusion finetuning demos on Hugging Face
- Conducted 8 technical interviews, contributing to hiring decisions for ML engineering team growth

Machine Learning Engineer — Deep Voodoo

Jun 2022 – Dec 2023

- Led the transition of a deepfake research pipeline into a scalable, production-ready system deployed in high-profile Hollywood projects
- Improved robustness and deployment speed by versioning and containerizing model training
- Led R&D projects in image restoration, facial detection for non-human faces, and image generation with controllable camera angle

AI Software Engineer — Boston Consulting Group

Jun 2019 – Jul 2021

- Built end-to-end data pipelines using PySpark, Pandas
- Productionized and deployed data applications across diverse client infrastructures (bare-metal, GCP, AWS, Azure)
- Built a CI/CD pipeline using JFrog to let consultants self-deploy cloud-based coding environments via a Dockerfile frontend

Data Scientist — Prazely (1st employee)

Oct 2018 – Apr 2019

- Built a content-based recommender system using Neo4j graph database for an e-commerce platform

Research Scientist — Orange Telecom

May – Sep 2018

- Benchmarked a parameter-free time series classifier against existing models

Python Developer — Freelance

Jul 2016 – Sep 2017

- Built a Twitter analytics web app (Flask) with unsupervised NLP and graph-based community detection

EDUCATION

M.S. in Mathematics and Computer Science — Université Paris Dauphine - PSL

2017 – 2018

M.B.A. — Bentley University

2015 – 2016

M.S. in Management — NEOMA Business School

2011 – 2014

SELECTED PROJECTS

All You Need Is One GPU — Inference benchmark for Stable Diffusion, cited by Google Research (2022)

Text-to-Naruto — Stable Diffusion finetuning demo published on Hugging Face (2022)

AI-Powered News Site — Automated LLM pipeline for news aggregation and article generation at news.lambda.ai
